Section 1 : Coding

1. Problem Statement

Ravi is developing a student registration system for a college. To efficiently store and manage the student IDs, he decides to implement a doubly linked list where each node represents a student's ID.

In this system, each student's ID is stored sequentially, and the system needs to display all registered student IDs in the order they were entered.

Implement a program that creates a doubly linked list, inserts student IDs, and displays them in the same order.

Input Format

The first line contains an integer N the number of student IDs.

The second line contains N space-separated integers representing the student IDs.

Output Format

The output should display the single line containing N space-separated integers representing the student IDs stored in the doubly linked list.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 5
10 20 30 40 50
Output: 10 20 30 40 50

Answer

```
// You are using GCC
#include<stdio.h>
#include<stdlib.h>

typedef struct Node{
    int data;
    struct Node* next;
    struct Node* prev;
}Node;

void insertEnd(Node** head,int data){
    Node* newNode = (Node*)malloc(sizeof(Node));
    newNode->data=data;
    newNode->next=NULL;

    if(*head==NULL){
        newNode->prev=NULL;
        *head=newNode;
        return;
    }
    Node* temp = *head;
    while(temp->next!=NULL){
        temp=temp->next;
    }
```

```
    temp->next=newNode;
    newNode->prev=temp;
}

void printlist(Node* head)
{
    Node* temp = head;
    while(temp!=NULL){
        printf("%d ",temp->data);
        temp=temp->next;
    }
    printf("\n");
}

int main()
{
    int N,id;
    Node* head=NULL;
    scanf("%d",&N);
    for(int i=0;i<N;i++){
        scanf("%d",&id);
        insertEnd(&head,id);
    }
    printlist(head);
    return 0;
}
```

Status : Correct **Marks : 10/10**
